ovarian cancer

The present invention describes the use of a polypeptide (1) in the manufacture of a medicament for stimulating a cytotoxic T cell response, where (I) comprises a first portion comprishing the part of human Pc that binds to CD64 and a second portion comprishing one or more heterologous T cell epitopes. Also described is a method of stimulating a cytotoxic T cell response in a patient such as a mammal, preferably human, by administering (I) to the patient. (I) has cytostatic activity and can be used in vaccine production. (I) and the nucleic acid encoding (I) are useful in the manufacture of a medicament for stimulating cytotoxic T

The growth of all solid tumours requires now blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or anatagonist. The invention is useful for diagnosing and treating disorders associated with anglogenesis, tumour growth and/or cancer metastasis. The present sequence is the partial amino acid sequence of a mouse anti-
preventing and/or treating
                cancer, e.g. colorectal, lung, breast, gastric or ovarian cancer. The medicament stimulates cytotoxic and helper T call responses. The antibodies are useful as vaccines to stimulate helper and cytotoxic T cell responses. The polypeptides and nucleic acids are useful in optimisation schedules for enhancing a protective immune response against cancer. The present sequence represents an Fv region SC100 antibody CDR-L3 amino acid sequence which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen agonist; collagen antagonist; concer metastasis; anti-cryptic collagen; antibody; HUI77; variable region light chain;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF-I and/or -2; and/or (ii) inhibit specifically tyrosine (IGF-IR) and/or -2; and/or (ii) inhibit specifically tyrosine (IGF-IR) and/or -2; and/or (iii) inhibit specifically tyrosine (IGF-IR) and/or epidermal growth factor receptor (EGRR) and/or with or expectation of these receptors with their ligands. Especially they inhibit (IGF-IR) and/or for these receptors with their ligands. Especially they inhibit (IGF-IR) and or for the control of normal cells to tumor cells, inhibit growth and/or prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psortlasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGRR. This sequence represents an CDR sequence used to generate the Ab of the invention.
                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; antipsoriatic; antibody; idf-1R, tyrosine kinase activity; insulin-like growth factor-1 receptor; IGF-1R, tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                            Gaps
site antibody HUI77 variable region light chain CDR to the invention.

The invention relates to a novel isolated anti-insulin-like growth factor capable of inding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CRR) consisting at least one complementary capable of an edge and absoluted the invention is useful in the preparation of a medicament intended for the prevention is useful in the preparation of a medicament intended for the prevention or treatment of an ilness connected with an overexpression and/or an abnormal cativation of the IGF-IR and/or EGFR, and/or connected with a hyperactivation of the transduction pathway of the signal mediated by the interaction of IGF1 or IGF2 with IGF-IR and/or of EGFR with EGFR, where interaction of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended

containing the transformation or normal cetts into cetts with cumulation character, preferably IGF-dependent, especially IGF1 and/or IGF2.

dependent and/or EGF-dependent, especially IGF1 and/or IGF2.

cuseful for preparation of amedicament intended to inhibit the growth and/or the proliferation of tumor cells, preferably IGF-dependent, especially IGF1-and/or IGF2-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to cancer the specific targeting of a biologically active compound to intended for the specific targeting of a biologically active compound to search service and an endicament of propersion or an underexpression of the IGF-IR and/or EGFR receptor is useful for in vitro diagnosis of illnesses induced by an overappression or an underexpression of the IGF-IR and/or EGFR receptor is and/or EGFR receptor is useful for in vitro diagnosis of illnesses induced by an overappression or an underexpression of the IGF-IR and/or EGFR receptor is useful for in vitro diagnosis of illnesses induced by an overappression or an underexpression of the invention. EGFR receptor is supperted, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of polypeptides and nucleic acids encoding the polypeptides, in manufacturing medicament for stimulating a cytotoxic T cell response and for preventing or treating cancer, e.g. colorectal, lung, breast or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes the use of a polypeptide (I) in the manufacture of a medicament for stimulating a cytotoxic T cell response, where (I) comprises a first portion comprising the part of human FC that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytotoxic T lymphocyte, CTL; T helper; MAGE3; cytotoxic T cell response; tumour; immune response; cancer; vaccine; antibody.
inhibit the transformation of normal cells into cells with tumoral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  For region SC100 antibody light chain related amino acid sequence #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 56; DB 9; Length 9; 100.0%; Pred. binds to CD64 and a second portion comprising one or more heterologous T cell epitopee. Also described is a method of stimulating a cytotoxic T cell response in a patient such as a mammal, preferably human, by administering (I) to the patient. (I) has cytostatic activity and can used in vaccine production. (I) and the nucleic acid encoding (I) are useful in the manufacture of a medicament for stimulating cytotoxic T cell response. The medicament is useful for preventing and/or treating cancer, e.g. colorectal, lung, breast, gastric or ovarian cancer. The medicament stimulates cytotoxic and helper T cell responses. The antibodies are useful as vaccines to esimulate helper and cytotoxic T cell responses. The polypeptides and nucleic acids are useful in oppinishing immunisation schedules for enhancing a protective immune response against cancer. The present sequence represents an Fy region SC100 antibody light chain related amino acid sequence which is used in
                                                                                                                                                                                                                                                                                                 Gaps

```
This invention describes a novel herbicide binding protein which can confer herbicide resistance activity. Crop plants, such as soybean, cotton, tobacco, sugarbeet, oilseed rape, canola, flax, sunflower, potato, tomato, alfalfa, lettuce, maize, wheat, sorghum, rye, bananas, barley, oat, turf grass, forage grass, sugar cane, pea, field bean, rice, pine, poplar, apple, grape, citrus or nut plants, transformed with a herbicide binding protein gene are resistant to the herbicides. Hence, weeds can be selectively controlled in a field of the transformed crops. The plants are substantially resistant or tolerant to herbicides, such as paraquat or diquat, that inhibit photosynthesis by accepting electrons from photosystem I thus generating free radicals which cause lipid proteins advantageously sequester the herbicide, e.g. cat the cell surface or in the vacuolse of a treated plant. Sequestration at the cell surface prevents the entry of the herbicide into the cell so that the herbicide cannot reach its intracellular target and exert any significant cyctoxic effect. The herbicide binding protein inhibits the mobility of the herbicide from the application site to the whole plant preventing the herbicide reaching particularly sensitive organs.

Additionally, tolerant plants can be produced against herbicides that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 56; DB 2; Length 112;

The invention provides a monoclonal antibody (WAb) designated 1A7, which elicits an anti-GD2 (tumor-associated antigen) immunological response in humans. WAb 1A7 has defined light and heavy chain variable region sequences. The MAb 1A7 and polypeptides can be used for eliciting an anti-GD2 immune response. The polypeptides can also be used for detecting or purifying anti-GD2 antibody. The products can be used for treating GD2 - associated diseases, e.g. melanoma, neuroblastoma, glioma, soft tissue carcinoma, and small cell carcinoma. They can be used for palliating the disease or for reducing the risk of recurrence. The present sequence represents the light chain variable region consensus sequence

Monoclonal antibody 1A7 and related polynucleotide(s) and polypeptide(s)

deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immunogenicity but shows similar binding to cells expressing EGF immunogenicity, as the original murine antibody and has increased ability to inhibit the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse; humanised form; monoclonal antibody alpha 340; gene therapy; epidermal growth factor receptor; EGF; cancer; colorectal; lung; breast; gastric; ovarian; immune response; cytostatic; cell growth; apoptosis; inhibitor; mutent; mutein; variant.

                                                                                                                                                         The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) receptor and inhibits binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immunogenicity but shows similar binding to cells expressing EGF immunogenicity but shows similar binding to cells expressing EGF inhibit the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                             New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse; humanised form; monoclonal antibody alpha 340; gene therapy; epidermal growth factor receptor; EGF; cancer; colorectal; lung; breast; gastric; ovarian; immune response; cytostatic; cell growth; apoptosis; inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gapa

mouse monoclonal antibody which binds to epidermal growth factor (BGF)
receptor and inhibits binding of BGF), obtainable from the cell line
deposited with the ECACC under accession number 97021428. The humanised
form of the antibody 340 is useful in gene therapy, medicine and in the
manufacture of a medicament for treatment or prophylaxis of cancer. The
invention is useful for treatment or prophylaxis of cancer. The
invention is useful for treatment or prophylaxis of cancer. The
covarian cancers or also for preventing the recurrence of ancer after
covarian cancers or also for preventing the recurrence of ancer after
covarian teatment or surgery. The invention is also useful for enhancing
a protective immune response against cancer by optimised immunisation
cochedules. The humanised form of the antibody 340 has reduced
immunogenicity but shows similar binding to cells expressing EGF
immunogenicity but shows similar binding to cells expressing EGF
immunogenicity but shows similar binding to cells expressing EGF
immunogenicity but shows similar binding to cells expressing EGF
indibit the growth of EGF receptor expressing cells. The invention is
used as cell growth and apoptosis inhibitor. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                   New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse; humanised form; monoclonal antibody alpha 340; gene therapy; epidermal growth factor receptor; EGF; cancer; colorectal; lung; breast; gastric; ovarian; immune response; cytostatic; cell growth; apoptosis; inhibitor; mutent; mutein; variant.

The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (BGF) receptor and inhibits binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immunogenicity but shows similar binding to cells expressing EGF immunogenicity but shows similar binding to cells expressing EGF inhibit the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

```
The invention relates to the recurrence and/or development of a ganglioside GD2-associated tumour, e.g. melanoma, in an individual which is delayed by administration of an antibody comprising light and heavy chain variable region sequences of the anti-idiotype monoclonal antibody 1A7. The antibody is used for delaying recurrence and/or development of GD2-associated tumour. e.g. melanoma, neuroblastoma, glioma, sarcoma, or small cell lung cancer, in individual, and for treating individual with GD2-associated tumour. The present sequence is a unique peptide region from an antibody sequence resembling the anti-idiotype antibody 1A7 heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mouse; monoclonal antibody; 1A7; anti-idiotype antibody; ganglioside GD2; cytostatic; melanoma; neuroblastoma; small cell lung cancer; tumour; antibody; variable region; VH; VL; glioma; soft tissue sarcoma; vaccine.
                                                                                                                                                                                                                                                                                                                                                heavy
                                                                                                                                                                                                                                                                                                                            Delaying recurrence and/or development of ganglioside GD2-associated tumor in individual, by administering antibody containing light and heavy chain variable region sequences contained in sequence of specified amino
heavy chain variable region; mouse; ganglioside GD2-associated tumour; melanoma; antibody; anti-idiotype; monoclonal antibody; 1A7; neuroblastoma; glioma; sarcoma; small cell lung cancer.

This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the partial amino acid sequence of the mouse anticryptic collagen site antibody HU177 variable region light chain used during the creation of the antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; antipsoriatic; antibody; IGF-1R; tyrosine kinase activity; insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; BGFR; signal transduction pathway; or epiderma; cancer; osteosarcoma; complementarity determining region;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      under conditions where the region were not total a sequence appearing as ADC35321 - ADC35370, a host cell comprising the polymuclectide, a fusion polymetic cell comprising the polymuclectide, a fusion polymetic comprising 1A7, a humanised antibody comprising 5 consecutive amino acids from the 1A7 variable regions and a vaccine comprising the antibodies. The antibodies are useful for associated disease in an individual. The GD2-associated diseases is chosen from melanoma, neuroblastoma, glioma, soft tissue sarcoma, and small cell carcinoma. The individual has a clinically detectable tumour, and the method is for palliating the GD2-associated disease. 1A7 is preferably useful for treating a tumour that was previously detected in the individual and has been treated and is clinically undetectable at the time of the administering of 1A7, or for reducing the risk of recurrence of a clinically detectable tumour. The under time of the administering of 1A7, and the humanised antibody are useful for detecting the presence of an anti-GD2 antibody bound to a time of the administering construction of the humanised antibody are useful for detecting the presence of an anti-GD2 antibody bound to a time of the administering the presence of an anti-GD2 antibody bound to a time of the administering the presence of an anti-GD2 antibody bound to a time of the administering the presence of an anti-GD2 antibody bound to a time of the administering the presence of an anti-GD2 antibody bound sequence for the time.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a monoclonal antibody 1A7 (an anti-idiotype antibody eliciting an anti-GD2(ganglioside) response). Also included are an antibody producing cell deposited under ATCC Accession No. HB-11786 (or its progeny), a polynucleotide comprising a sequence encoding a polypeptide with immunological activity of 1A7 (where the polypeptide comprises at least 5 consecutive amino acids from a variable region of 1A7), an isolated polynucleotide comprising a region of at least 20 consecutive nucleotides that is capable of forming a stable duplex with a polynucleotide encoding the light or heavy chain variable region of 1A7 under conditions where the region of form a stable hybrid with a

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Disclosure; SEQ ID NO 54; 164pp; French

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with a comparation of hyperactivity of signal transduction pathways mediated by interaction of hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Also described is a method of stimulating a cytotoxic T cell response in a patient such as a mammal, preferably human, by administering (I) to the patient. (I) has cytostatic activity and can be used in vaccine production. (I) and the nucleic acid encoding (I) are useful in the manufacture of a medicament for stimulating cytotoxic T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fv region SC100 antibody CDR-L3 amino acid sequence.

The growth of all solid tumours requires mew blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or the invention is useful for dagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the partial amino acid sequence of a mouse anti-
cell response. The medicament is useful for preventing and/or treating cancer, e.g. colorectal, lung, breast, gastric or ovarian cancer. The medicament stimulates cytotoxic and helper T cell responses. The antibodies are useful as vaccines to stimulate helper and cytotoxic T cell responses. The polypeptides and nucleic acids are useful in optimising immunisation schedules for enhancing a protective immune response against cancer. The present sequence represents an Fv region SC100 antibody CDR-L3 amino acid sequence represents an Fv region from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               grafted antibody, complementarity determining region, CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen agonist; cancer metastasis; anti-cryptic collagen; antibody; HUI77; variable region light chain;
                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse HUI77 light chain CDR3 partial amino acid sequence SeqID36.
                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-18) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-18. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-18 and/or prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-18 and/or prevent or hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit growth and/or transformation of normal cells to tumor cells, inhibit growth and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                       insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                           Gapa
cryptic collagen site antibody HUI77 variable region light chain CDR which is related to the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel isolated anti-insulin-like growth factor receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (GDR) consisting of one of two fully defined 16 amino acids (ADS67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of a milness connected with an overexpression and/or an abnormal coffination of the IGF-IR and/or connected with a hyperactivation of the transduction pathway of the signal mediated by the interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended

character, preferably IGF-dependent, especially IGF1 and/or IGR2.

Character, preferably IGF-dependent and/or HER2/neu-dependent cells. (I) is dependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is useful for preparation of a medicament intended to inhibit the growth and/or the proliferation of tumor cells, preferably IGF-dependent, and/or the proliferation of tumor cells, preferably IGF-dependent, cells, (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriaals. (I) is useful in preparation of a medicament content of psoriaals. (I) is useful in preparation of a medicament content of psoriaals. (I) is useful in preparation of a medicament content of psoriaals. (I) is useful in preparation of a medicament content of psoriaals. (I) is useful in preparation of a medicament content of psoriaals. (I) is useful in preparation of a medicament of intended for the specific targeting of a biologically and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor is suspected, which involves contacting the contacting the biological sample with (I), which is optionally labeled. The present contacting the sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The specification describes an against the G glycoprotein of respiratory syncytial virus, with a variable region comprising a first domain from a variable light chain region and a second domain a variable heavy chain region. The antibodies of the invention are useful for treating and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antibody against the G glycoprotein of RSV with a variable region having a first and second domain from a VL and VH region, respectively, useful for treating respiratory syncytial virus (RSV) infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDR derived from the VL region of an anti RSV G glycoprotein antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (as) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for disponanting and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth, angiogenesis; tumour growth, cytostatic; collagen agonist; collagen anti-cryptic collagen; HUI77; variable region light chain; mouse; murine;
             eyncytial virus (RSV). The present sequence represents a complementarity determining region (CDR) derived from the variable light chain (VL) region of an antibody directed against the G glycoprotein of RSV. This peptide is used to construct antibodies of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cryptic collagen site antibody HUI77 variable region light chain CDR which may be used during the creation of an antibody of the invention.

The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HUI77 variable region light chain CDR which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                                                                                                                                  grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen agoniet; collagen anti-cryptic collagen atti-cryptic collagen; HUI77; variable region light chain; mouse; murine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Sequence 9 AA;

Mouse HUI77 mutant light chain CDR amino acid sequence SeqID145.

(first entry)

29-JAN-2004

ADD94260;

```
fragment comprising one or more complementarity determining regions cCDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of antagonist. The invention activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HU177 variable region light chain CDR which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                     grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen agonist; collagen anti-cryptic collagen anti-cryptic collagen; HUI77; variable region light chain; mouse; murine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel grafted antibody or its functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                      Mouse HUI77 mutant light chain CDR amino acid sequence SeqID132.

                                                                            prafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen antagonist; cancer metastasis; anti-cryptic collagen; HUI77; variable region light chain; mouse; murine; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (as) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, anglogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cryostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with anglogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anticryptic collagen site antibody HUI77 variable region light chain CDR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   grafted antibody; complementarity determining region; CDR; light CDR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mouse HUI77 mutant light chain CDR amino acid sequence SeqID141.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô

This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anticryptic collagen site antibody HUI77 variable region light chain CDR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; heavy CDR vessel growth, angiogenesis; tumour growth; cytostatic; collagen agonist; collagen anti-cryptic collagen HUI77; variable region light chain; mouse; murine;

                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HU177 variable region light chain CDR which may be used during the creation of an antibody of the invention.

CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention growth and/or cancer metastasis. The associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse antiperprise collagen site antibody HUIT? variable region light chain CDR which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           grafted antibody, complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; anglogenesis; tumour growth; cytostatic; collagen agoniat; collagen antisoniat; cancer metastasis; anti-cryptic collagen; HUI77; variable region light chain; mouse; murine;
                                                          New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                                This invention relates to a novel grafted antibody or its functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with anglogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse HUI77 mutant light chain CDR amino acid sequence SegID140.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                   fragment comprising one or moves complementarity determining regions of defined light CDR and a heavy CDR with at least one amino acid (as) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HU177 variable region light chain CDR which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth, angiogenesis; tumour growth; cytostatic; collagen agonist; collagen anti-cryptic collagen; HUI77; variable region light chain; mouse; murine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel grafted antibody or its functional
                                                                                                                                                                                                                New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse HUI77 mutant light chain CDR amino acid sequence SeqID142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                        ö
                                             fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (las) substitution where the antibody has specific binding activity for a cryptic collagen epicope. The growth of all solid tumours requires new blood vessel growth, anglogenesis, inhibition of which is an approach the amour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with anglogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HU177 variable region light chain CDR which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth, angiogenesis; tumour growth; cytostatic; collagen agonist; collagen anti-cryptic collagen; HUI77; variable region light chain; mouse; murine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires
                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel grafted antibody or its functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                    This invention relates to a novel grafted antibody or its functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse HUI77 mutant light chain CDR amino acid sequence SeqID127.

```
CC to limiting tumour growth, angiogenesis, inhibition of which is an approach continiting tumour growth. The invention may allow development of the integration with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody MINT7 variable region light chain CDR cryptic collagen site antibody MINT7 variable region light chain CDR which may be used during the creation of an antibody of the invention.
